BIENNIAL STRATEGY REVIEW SYSTEM Chesapeake Bay Program

Logic and Action Plan: 2022 Quarterly Progress Meeting

Toxic Contaminants Policy and Prevention - 2021-2022

Long-term Target: An accelerating rate of decline of PCB levels in fish

Two-year Target: Completion of work activities. A two-year measure of PCB levels in fish is not available.

Instructions: Before your quarterly progress meeting, provide the status of individual actions in the table below using this color key.

Action has been completed or is moving forward as planned.

Action has encountered minor obstacles.

Action has not been taken or has encountered a serious barrier.

| Factor | Current Efforts | Gap | Actions | Metrics | Expected Response and Application | Learn/Adapt |
|---|--|---|--|--|---|--|
| What is impacting our ability to achieve our outcome? | What current efforts are addressing this factor? | What further efforts or information are needed to fully address this factor? | What actions are essential (to help fill this gap) to achieve our outcome? | What will we measure or observe to determine progress in filling identified gap? | How and when do we expect these actions to address the identified gap? How might that affect our work going forward? | What did we learn from taking this action? How will this lesson impact our work? |
| Scale - Broad geographic extent and distribution of PCBs and other contaminants of concern (i.e. PAHs) - Variety of sources and pathways for PCBs entering the environment that necessitate a wide- | Considerable activity in implementing PCB TMDLs among the states particularly Maryland, Virginia, the District. Some level of coordination among the jurisdictions and through the Chesapeake Bay Program. | There are rivers and tidal segments in the watershed that are listed as impaired by the jurisdictions but do not yet have TMDLs in place The factors that are related to broad distribution of PCBs that enter the | Coordination among the jurisdictions at a scale that is commensurate with the broad geographic distribution of PCB's. e.g., the PCB Consortium concept in Management Approach 5. | Level of interaction among jurisdictions Rate of development of PCB TMDLs | All PCB-impaired waters have active TMDLs in place. No time estimates available. The affect will be a TMDL framework in place that the partnership can then work together to optimize | |

| range of very different management responses (e.g., primary sources such as electrical equipment, secondary sources such as wastewater treatment byproducts, and pathways such as stormwater runoff contaminated by air deposition or contaminated sites) | The toxic contaminants workgroup is producing products to help with identification of sources and pathways. | system through many sources are not directly managed by the CBP TCW. Rather they influence at times the way we design work related to identifying and reducing sources of PCBs. | | | | |
|---|--|---|---|---|--|--|
| Stakeholder Mindset - Political will to modify regulatory programs and/or create voluntary programs - Need to continue shifting paradigm by acknowledging that there are ongoing sources of PCBs (i.e., PCBs are not static "legacy" contaminants) - The extent of collaboration and coordination among the science and management communities at a scale that is commensurate with the extent of PCB impairments and TMDLs | The watershed jurisdictions and federal regulatory authorities have advanced work in highly contaminated areas including Anacostia River and Baltimore harbor. | The PCB contamination of waterways, sediment and fish receives minimal attention from CBP partners. Activities related to other pollutants particularly nutrients in sediment received the vast majority of focus Ann resources from CBP partners Jurisdictions have minimal motivation to coordinate on Interstate loads of PCB's. Little coordination takes place on TMDLs that have significant cross state loading issues | PCB Consortium Fish Consumption Advisory infographic | Level of interest, participation, inquiry and investment in PCB TMDLs by jurisdictions. | Measurement strategy needed | |
| Knowledge of Sources and Best Management | The Toxic Contaminants Workgroup is | Lack of comprehensive | BMP effectiveness studies | Amount of uncertainty in relative size of | Increased understanding of BMP effectiveness | |

Updated September 6, 2022

| Practices to Apply - Knowledge gaps on relative sizes of PCB sources and most effective best management practices | producing products to help with identification of sources and pathways and to help with understanding of the relative sources of PCBs | loading model for the waterdshed | | sources and BMPS most effective in eliminating or trapping PCBs | by 2022 will affect CBP ability to build reliable PCB load estimating tools | |
|--|---|--|--|--|--|--|
| Cost - High cost of testing and remedies: in-stream sediment remediation; wastewater PCB source trackdown studies; electrical equipment replacements; stormwater controls; contaminated site remediation | Jurisdictions and federal regulators attempt to match data needs and remedial technology selections with the most cost-effective methods available | Slow pace of innovation in PCB testing and remediation technology to reduce cost | No specific activities. The factors that are related to the high cost of testing and remediation of PCBs are not directly managed by the CBP TCW. Rather they influence at times the way we design work related to identifying and reducing sources of PCBs. | | | |

| | | ACTIONS – 2020/202 | 21 | | |
|----------|--|--|--------------------------------------|------------------------|----------------------|
| Action # | Description | Performance Target(s) | Responsible Party (or Parties) | Geographic Location | Expected Timeline |
| Manage | ment Approach 1: Regulatory Pr | ograms | | | |
| 1.1 | Continue jurisdictional monitoring for PCB occurrence to assess need for new local TMDLs and progress related to reducing PCB loads. | Pennsylvania 1.1.1 Continue statewide monitoring for PCBs in fish at approximately 100 sites. Not all in Susquehanna drainage. Virginia 1.1.2 Estuarine probabilistic monitoring in small tidal tributaries and embayments of | PaDEP VaDEQ | | |

| | | ACTIONS - 2020/202 | 21 | | |
|-------------|-------------|---|--------------------------------------|------------------------|----------------------|
| Action # | Description | Performance Target(s) | Responsible Party (or Parties) | Geographic Location | Expected Timeline |
| | | the CB which, includes a list of 21 PCB congeners in sediment. 1.1.3 Monitor all main stem tributaries to Bay listed as impaired. Fish PCB monitoring used on an as needed basis to monitor status. 1.1.4 TMDL source investigation studies TMDL being developed. Includes sediment monitoring and low-level water column | VaDEQ VaDEQ | | |
| | | samples. Future PCB monitoring will take place within PCB fish consumption impairments that require a TMDL which includes the Rappahannock and York Rivers. Field studies will be planned and implemented for these two Chesapeake Bay tributaries during 2021. | | | |
| | | Maryland 1.1.5 Continue annual PCB monitoring in support of PCB TMDL development. Monitoring includes collection of water column (non-tidal/tidal), sediment and fish tissue samples for PCB analysis to support the development of water quality models in establishing PCB TMDLs. Datasets that trigger changes in listings will be shared with the TCW. | MDE | | |
| | | 1.1.6 Conduct toxic contaminant monitoring for the tidal waters of Aberdeen Proving | MDE | | |

| | | Grounds (APG). | | | |
| | | 1.1.7 Continue annual PCB fish tissue monitoring for MDE's Fish Consumption Advisory Program to assign state- wide fish consumption advisories. The program also provides fish tissue data for MDE's Environmental Assessments and Standards (EASP) and TMDL Programs to support Integrated Report listing | MDE | | |
| | | assessment and TMDL development. 1.1.8 Conduct fish tissue study. In FY 2020, DDOEE entered into an MOU with US Fish and Wildlife Service to conduct a fish tissue study. The project is expected to be completed in FY 2021. | DDoEE | | |
| | | 1.1.9 Complete toxics monitoring on sediments in the Anacostia. Remedial Investigation, Feasibility Report and Proposed Plan reports were completed DDOEE is addressing public comments with a plan to produce an Interim Record of Decision (ROD) with a section dedicated to Responsiveness Summary. The interim ROD is scheduled to be posted on the DDOEE web site by September 30, 2020. | DDoEE | | |
| | | 1.1.10 Approximately every five years, West Virginia performs a statewide fish tissue assessment to inform both fish | WV | | |

|-------------|---|--|--------------------------------------|------------------------|----------------------|
| Action # | Description | Performance Target(s) | Responsible Party (or Parties) | Geographic Location | Expected Timeline |
| | monitoring, guidance documents and local-level input. | Stormwater Industrial permits have been identified as requiring PMPs and are at different stages of implementation. MS4s have submitted Action Plans. 1.2.2 Tidal James and Elizabeth rivers' point sources that have not screened effluent using the low level method will be required to do so. Facilities that have screened their effluent and exceeded their WLA will be required to submit PMPs. Additional point source monitoring will occur once the tidal James River PCB TMDL is in place; PMPs will be required at applicable facilities. | VaDEQ | | |
| | | Maryland 1.2.3 Phase 1 MS4's which have been assigned a WLA within a PCB TMDL requiring a PCB load reduction are required to develop a PCB Implementation Plan within one year of an approved TMDL. | MDE | | |
| | | District of Columbia 1.2.4 Implement stormwater BMPs and green infrastructure to meet TMDL IP's first set of 5-year milestones. DDOEE is continuously working to implement and document BMPs to meet the required targets of the MS4 permit. | DDoEE | | |

| | | ACTIONS – 2020/202 | 21 | | |
|----------|--|--|--------------------------------------|------------------------|----------------------|
| Action # | Description | Performance Target(s) | Responsible Party (or Parties) | Geographic Location | Expected Timeline |
| 1.3 | Determine consistent implementation measures to use throughout the Bay watershed for tracking local TMDL development and implementation progress. | 1.3.1 Assess available information on identified management action implementation and determine next steps (e.g. status of NPDES permits with regard to inclusion of PMP; MS4 action plans to ID potential IDDE connections to PMPs). Previous product was a memo on incorporating PMP approaches but not numeric effluent limitations. Follow up is needed to examine memo. | TCW | | |
| 1.4 | Determine whether the jurisdictions compile existing PCB outfall monitoring data for NPDES dischargers and assist with development of systems to compile all available information from governmental and academic organizations. This inventory will help determine whether there is a need for additional monitoring requirements to support TMDL | Pennsylvania 1.4.1 Reasonable potential analysis during permit reviews should include PCBs, but is focused on industrial permits. Virginia 1.4.2 Virginia has an Access Database used to store PCB data obtained from a wide array of matrices (sediment, water, effluent, etc.). The database structure, obtained from DRBC, was designed specific to storing data analyzed and reported using method 1668 including 209 PCB congeners (aka DRBC protocol). Status: VA continues to use the Access Database although it is planned to be incorporated into DEQ's enterprise database (CEDS - Comprehensive Environmental Data System). This may now be delayed for two | PaDEP | | |
