Chesapeake Bay Program

The Chesapeake Bay Program is a unique regional partnership that directs and conducts the restoration of the Chesapeake Bay by bringing together local, state and federal governments, non-profit organizations, watershed residents and the region's leading academic institutions in a partnership effort to protect and restore the Bay.

The Chesapeake Bay Program signatories – the state of Maryland; the commonwealths of Pennsylvania and Virginia; the District of Columbia; the U.S. Environmental Protection Agency representing the federal government; and the Chesapeake Bay Commission representing Bay state legislators – have committed to reducing pollution, restoring habitat and sustainably managing fisheries since signing the Chesapeake Bay Agreement of 1983.

Subsequent agreements have augmented the original program, and most recently culminated in signing Chesapeake 2000, an agreement intended to guide restoration activities throughout the Bay watershed through 2010. Chesapeake 2000 also provided an opportunity for the headwater states of Delaware, New York and West Virginia to join in regional efforts to improve water quality of the Bay and its tributaries.

Since its inception, the Chesapeake Bay Programs highest priority has been the restoration of the Bays living resources its finfish, shellfish, bay grasses, and other aquatic life and wildlife. Improvements include fisheries and habitat restoration, recovery of bay grasses, nutrient reductions and significant advances in estuarine science.

Acknowledgments

Development of *A Comprehensive List of Chesapeake Bay Basin Species 2007* was supported by the U.S. Environmental Protection Agency (Contract CB-97339102-1) and the Interstate Commission on the Potomac River Basin, an interstate compact river basin commission whose signatories are the Maryland, Virginia, Pennsylvania, West Virginia and the District of Columbia.

Preface

A Comprehensive List of Chesapeake Bay Basin Species 2007 provides a list of aquatic and aquatic-associated organisms found in recent decades in the Chesapeake Bay Basin. The list is not exhaustive because a) it is based primarily on taxa identified in monitoring programs and not all aquatic taxonomic groups are monitored in the basin, and b) the focus has been on taxa found in tidal waters. An initial species list was compiled in 1992 by the EPA from monitoring data collected by federal and state agencies and private institutions (CBP/TRS 70/92). Subsequent searches in 1993 (Interstate Commission on the Potomac River Basin), 1996-1997 and 2007 (Chesapeake Bay Program Data Center) identified more aquatic Chesapeake Bay species information. The Chesapeake Bay Program began publishing periodic updates of the Comprehensive List of Chesapeake Bay Basin Species in 1997.

Sources

A list of species names was originally compiled from lists in reports or databases produced by:

- Interstate Commission on the Potomac River Basin
- Maryland Department of the Environment
- Virginia Institute of Marine Sciences
- Old Dominion University
- Morgan State University Estuarine Research Center- Previously known as Academy of Natural Sciences, Benedict Estuarine Research Center
- Versar, Inc.
- Gunston Cove Ecosystem Monitoring Program, George Mason University
- District of Columbia Biomonitoring Program
- Public Health Service National Water Quality Network (1958 - 1968)
- Smithsonian Estuarine Research Center- National Exotic Marine and Estuarine Species Information System

Species names were also obtained from the following documents:

- Habitat Requirements for Chesapeake Bay Living Resources. 1991. Editors: S. L. Funderburk, S.J. Jordan, J. A. Mihursky and D. Riley for the Living Resources Subcommittee of the Chesapeake Bay Program.
- Distribution of Submerged Aquatic Vegetation in the Chesapeake Bay. 1989. Virginia Institute of Marine Sciences, Gloucester Point, VA.
- Life in the Chesapeake Bay. 1984. A. J. Lippson and R. L. Lippson. The Johns Hopkins University Press.
- Environmental Atlas of the Potomac Estuary. undated. A. J. Lippson et al. Prepared by Environmental Center, Martin Marietta Corporation for the Power Plant Siting Program, Maryland Department of Natural Resources.
- Index and Field Guide to the Fishes of the District of Columbia. 1987. J. D. Cummins. District of Columbia, Department of Consumer and Regulatory Affairs, Environmental Control Division, Fisheries.
- Field Guide to the Submerged Aquatic Vegetation of Chesapeake Bay. 1990. L. M. Hurley. US Fish & Wildlife Service, Chesapeake Bay Estuary Program.
- H.G. Marshall, L. Burchardt and R. Lacouture (2005) A review of phytoplankton composition within Chesapeake Bay and its tidal estuaries. Journal Of Plankton Research, 27(11):1083-1102.

The list is updated annually with new species identified in the ongoing Chesapeake Bay Program biological monitoring programs. In the future, more emphasis will be placed on identifying basin species in non-tidal surface waters.

NODC and Taxonomic Serial Number Codes

Taxa in the 2007 species list were matched by scientific name to the National Oceanographic Data Center (NODC) Taxon Codes Version 8.0. The NODC Taxon Code is a hierarchical system of numerical codes used to represent the scientific names and phylogeny of organisms. The code links the Linnean system of biological nomenclature to a numerical schema that facilitates modern methods of computerized data storage and retrieval. An NODC code contains a maximum of 12 digits partitioned into 2-digit couplets. Each couplet represents one or more levels of the taxonomic hierarchy. For example:

| Digit | Represents |
|-------|--------------------|
| 1-2 | Phylum |
| 3-4 | Class and/or Order |
| 5-6 | Family |
| 7-8 | Genus |
| 9-10 | Species |
| 11-12 | Subspecies |

One drawback of the NODC code is it changes over time to reflect current changes in taxonomic classifications. However, it provides data analysts with a very useful tool for sorting organisms into taxonomic groups.

Each species corresponding ITIS Taxonomic Serial Number (TSN) is also provided in this document. The ITIS (Interagency Taxonomic Information System) is a partnership of federal agencies working together to improve the organization of, and access to, standardized nomenclature. As part of this system a national, easily accessible database with reliable information on species names and their hierarchical classification has been established. The database is reviewed periodically to ensure high quality with valid classifications, revisions, and additions of newly described species. As part of this effort all Federal agencies have been asked to adopt the use of TSN code which assigns each recognized species a permanent number. The TSN allows a species to be tracked over time regardless of changes in name and taxonomic classification. TSN also provides a uniform key field for database development and species identification across multiple organizations. When used in conjunction with the NODC, the TSN overcomes the problem of numeric changes in the NODC code whenever species are reclassified.

Synonymous species are denoted in the 2007 Bay Basin Species list by a flag field named SYN. A code of S means a name is an ITIS recognized synonym and SA indicates the name is the accepted name for the taxa. Synonymous species will have identical NODC Taxon Codes.

Temporary codes are assigned to taxa that are recognized in the scientific literature but have not been assigned an NODC Code and a TSN. The value bayxxxx has been assigned to all taxa without TSN. A temporary NODC code is developed for each unassigned taxon based on its known taxonomy and its species name. For example, the beginning couplets of the NODC code which reflect the known phylogeny of an unassigned taxon are combined with letters from its species name to form a temporary code.

Organization of Species List in this Document

In the 2007 version of this document, Bay taxa are divided into large phylogenetic groupings and presented alphabetically within each grouping. Associated with each taxon is its most recent NODC code (NODC Version 8.0), its ITIS Taxon Serial Number (TSN), and its common name if one exists.
