

Chesapeake Watershed PCB Story Map

Description

A GIS-based story map that displays those areas in the Chesapeake watershed where impairments due to PCBs have been identified by the watershed states and the District of Columbia. Additional map panels tell the story about where those impairments are being addressed through existing PCB TMDLs, where PCB TMDLs are under development and where there is an impairment with no TMDL in place or in progress. The map helps the Chesapeake Bay Program's Toxic Contaminant Workgroup to design and implement work activities that assist with PCB TMDL implementation (e.g. pollution minimization plan guidance) and it identifies areas where PCB TMDLs should be considered.

Contacts

Program: Greg Allen, EPA Chesapeake Bay Program Office, allen.greg@epa.gov

Technical: John Wolf, USGS, JWolf@chesapeakebay.net

Current Users

Chesapeake Bay Program, Water Quality Goal Implementation Team, Toxic Contaminants Workgroup

Other Possible Users

EPA Region 3 divisions – Land Chemicals, Hazardous Site Cleanup, Water Protection
