EOT and EOS are different due to water chemistry and stream physiology processes.

	<p>Sarah would like more information on the difference between these two numbers. Jeff will include this information in the Protocol document.</p> <ul style="list-style-type: none"> ○ Jeff ran through a spreadsheet that demonstrates how Pennsylvania planning goals were calculated for each agency by county. Target numbers were determined by taking the difference between no action and E3 which shows the controllable load and then multiplying the controllable load by 73.9% of the E3 scenario. ○ DC also used a percent of E3 method for calculating proposed federal facility goals. Virginia’s proposed federal planning goals are based on WIP II load reductions. Maryland intends to keep the same federal planning goals from WIP II. New York and West Virginia are not assigning federal planning goals. ○ ACTION: Jeff Sweeney will send the Pennsylvania method to the FFWG by November 27th and agencies will submit comments to EPA (Jeff Sweeney) and Pennsylvania (Nicki Kasi and Ted Tesler) by December 11th. ○ ACTION: Jeff Sweeney will go over an updated draft of the Protocol document at the December Federal Facility Workgroup Meeting. FFWG members will submit comments at the January 8th meeting and a final Protocol will be completed by February.

	<ul style="list-style-type: none"> ○ Olivia showed new information and functionality added to CAST for federal facilities to use to model loads on their own land uses, not those that are officially part of the model. The new information includes a report of nitrogen, phosphorus, and sediment loading rates (lbs. per acre) and the ability to compare the loading rates among scenarios. ○ If you have questions on how to take loads from the agency-level to the facility-level, you can email Olivia Devereux.
