

Integrating Science and Developing Approaches to Inform Management for Chemicals of Concern in Agricultural and Urban Settings

Emily Majcher, Kelly Smalling, & Scott Phillips, USGS
TCW Feb, 2020

Final report summary of the STAC Workshop held May 2019

Watershed Agreement: Toxic Contaminants Goal

Policy and Prevention Outcome: focused on PCBs

Research Outcome

- Continually increase our understanding of the impacts and mitigation options for toxic contaminants.
- Develop a research agenda and further characterize the occurrence, concentrations, sources and effects of mercury, PCBs and other contaminants of emerging and widespread concern.
- In addition, identify which best management practices might provide multiple benefits of reducing nutrient and sediment pollution as well as toxic contaminants in waterways.

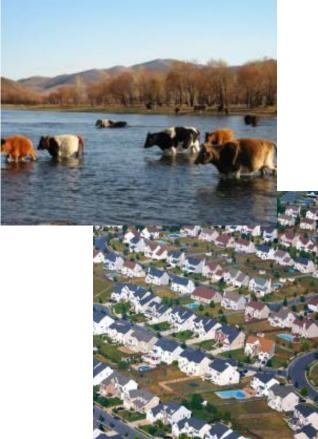

Workshop Objectives

- Discuss contaminants related to fish consumption advisories, fish health, and emerging concern;
- Identify sources, occurrence, and transport of contaminants in agricultural and urban settings;
- Characterize opportunities to mitigate effects of contaminants in each setting by taking advantage of nutrient and sediment reductions, and other innovative approaches;
- Identify future needs for research and more integrated management approaches

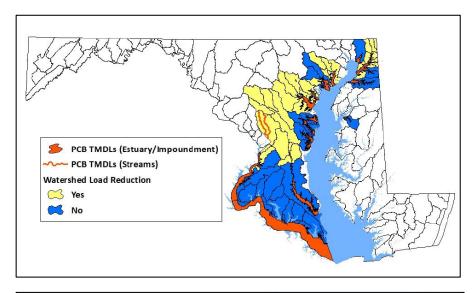

Workshop Agenda

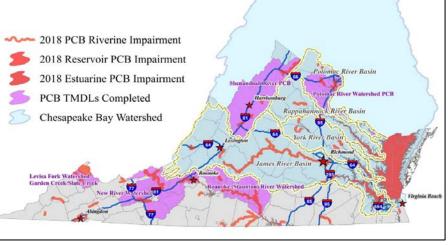

- Jurisdictional Panel: Overview of issues and mitigation efforts
- Session 1: Primary contaminants related to fish consumption advisories and fish health
- Session 2: Primary contaminant sources, fate, and transport (included outside watershed perspectives)
 - Breakouts: Urban and agricultural groups
- Session 3: Mitigation and potential of nutrient and sediment management actions for contaminant reductions
 - Breakouts: Urban and agricultural groups

Jurisdictional Panel Highlights

- Most jurisdictions using local TMDLs to address toxic contaminants
 - PCB dominated
- NPDES permits
 - MS4
 - Industrial
 - Individual
- Other
 - DC coal tar sealant ban (PAHs)
 - Anacostia sediment study (megasite)
 - DE integrated cleanup and TMDL programs (WATAR)

What are the chemicals contributing to fish consumption advisors?

- PCBs & Mercury: widespread fish consumption advisories
 - Range from "No consumption to 8 meals per month"
- Organochlorine pesticides: lesser extent

Emerging contaminants: fish consumption advisories not established

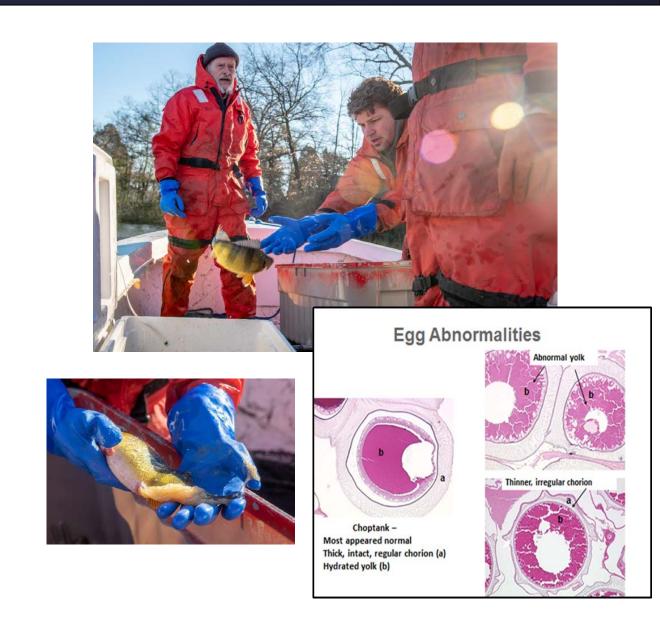

(Photo: Kjellerup, 2019)

How are contaminants affecting fish health?

Urban settings:

- Neoplasia (abnormal tissue growth)
 - Tumors in Brown bullheads
 - DNA alteration
 - PAH exposure (PCBs and DDT)
- Reduced reproductive success of yellow perch
 - Combined exposures to legacy (e.g., PCBs) and emerging contaminants

Science needs and recommendations

Fish health

- Early indicators of sub-lethal effects
- Risk factors contributing to skin tumors and skin lesion
- Identify chemical concentration thresholds
- Management actions to reduce exposure
 - Sources of pollutants entering the food chain & causing consumption advisories
 - BMPs and effects on fish health
 - Monitoring in Potomac
 - Small mouth bass populations

Lesions decreasing

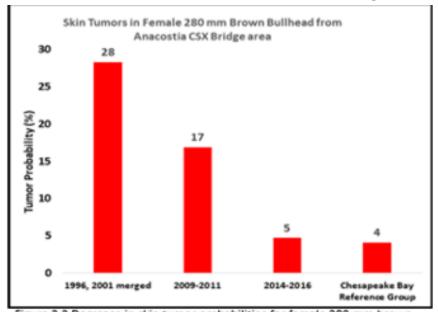

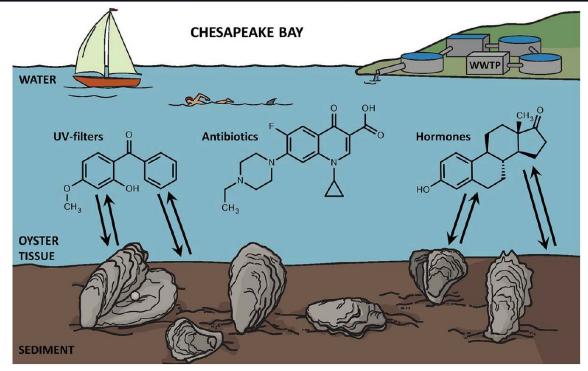

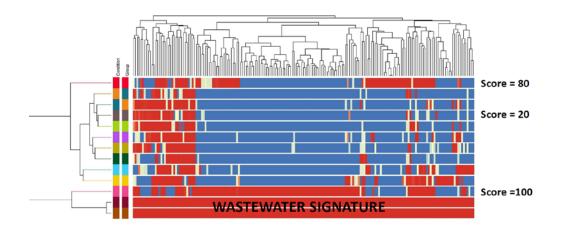

Figure 2.2 Decrease in skin tumor probabilities for female 280 mm brown bullhead from the Anacostia River (Pinkney et al. 2019)

Urban Areas: Contaminant Sources, Fate, Transport

- Fate and transport of CECs and transformation products are largely unknown
- While urban conveyance sources are well known (ww, stormwater, atm), complexity of urban systems complicates source definition and selection of appropriate management for habitat improvement
 - Puget Sound "fingerprinting" sources
 - Hudson R. sediment removal in upper portion has so far resulted in limited impacts to fish in lower portion (\$1B effort)

Urban Areas: Opportunities to Reduce Toxic Contaminants

- Sediment capture and reactive filter
 BMPs reduce concentration and toxicity
 related to urban stormwater runoff
- Iron-enhanced sand filtration reduces concentrations of pesticides and wastewater indicators
- In stream innovative treatment using activated carbon with and without bioamendments immobilizes and degrades PCBs

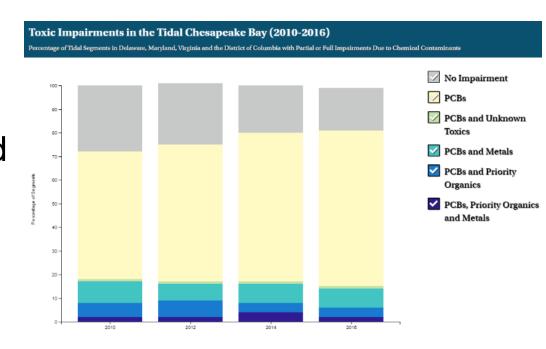

Urban Areas: Science Needs and Recommendations

- Improve best practices for source evaluation and conceptual model improvement for management selection
 - Example Anacostia R sediment project
- Better define the fate and transport of toxic contaminants in different settings including stormwater control structures (effectiveness and OM knowledge gaps)
- Compile and communicate efficiencies and effectiveness of BMPs and in stream mitigation for concentration reduction and improvement of aquatic organism health

Next Steps: STAC Letter to CBP

Gaps in compiling and communicating potential removal efficiencies for contaminants

- Continued expansion and compilation of BMP studies
- Examine known and emerging contaminants
- Capitalize on possible co-benefits
- BMPs are necessary investment to reduce contaminant loads and improve water quality
 - Research investment to understand co-benefits or negative impacts
 - Close working relationship between researches and management community to develop tools
- Prepare CBP responses to STAC

Potential CBP Responses to STAC

STAC:

- Gaps in compiling and communicating removal efficiencies
- Close working relationship between researches and management community

CBP Action 1: Enhance Interaction with Audiences for Contaminant Information

- Jurisdictions:
 - Implementing Phase 3 WIPs
- Water Quality GIT & workgroups
 - Ag, Stormwater, WWTP
- Local TMDL implementation
 - States, DC, and local jurisdictions
- Science providers

Potential CBP Responses

<u>STAC:</u> Close working relationship between researches and management community

CBP Response 2: Take advantage of Phase 3 implementation

- Nutrient and sediment BMPs with contaminant benefits
- Jurisdictions consider BMP planning
- New findings provided 2 years
- Materials to inform decisions

2020	2021	2022	2023	2024	2025
Phase 3 WIPs	New findings		New findings		New findings

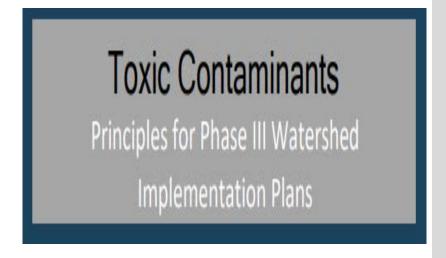

Potential CBP Responses

STAC: Gaps in compiling and communicating removal efficiencies; close working relationships

CBP 3: Enhance Communication Materials to Inform Decisions

- Stakeholder input on most useful topics
 - Ag, Urban, WWTP WGs
- Fact Sheets/Briefing Materials

Best Management Practice	Urban Pollutants	Agricultural Pollutants
Ag Forest Buffer		4
Streamside Forest Buffers		3
Narrow Forest Buffer	3	3
Runoff Reduction	2.5	
Wet Ponds	2.5	
Urban Forest Buffers	2.5	
Filtering Practices	2	
Infiltration Practices	2	
Dry Ponds	2	
Bioretention	1.5	

Potential CBP Responses

STAC:

- Research investment to understand co-benefits or negative impacts;
- Gaps in compiling and communicating potential removal efficiencies for contaminants

CBP 4: Compile results and expand BMP studies

- Science needs updated
- Synthesis of BMPs from existing studies
- Expand studies for contaminants of most concern
- Monitoring for progress in reducing contaminants/impacts

CBP 5: Selected BMP results into CBP tools

Watershed Dashboard, modeling, and CAST

Next Steps and Questions

- Present findings and draft response to WQ GIT and WGs
- Response through CBP to STAC

- Progress on responses
- Build into TCW action plans

Questions?

- Follow-up:
- Scott Phillips
