

Numeric Progress for the Urban Sector Mid-Point

Jeff Sweeney
Environmental Protection Agency
Chesapeake Bay Program Office
jsweeney@chesapeakebay.net
410-267-9844

Urban Stormwater Workgroup Meeting
April 17, 2018

How do we measure progress?

- 1) Trends from monitoring data throughout the estuary
- 2) Trends in monitored loads from the non-tidal water network
- 3) Reported programmatic achievements
- 4) Reported BMP implementation levels
- 5) Modeled loads

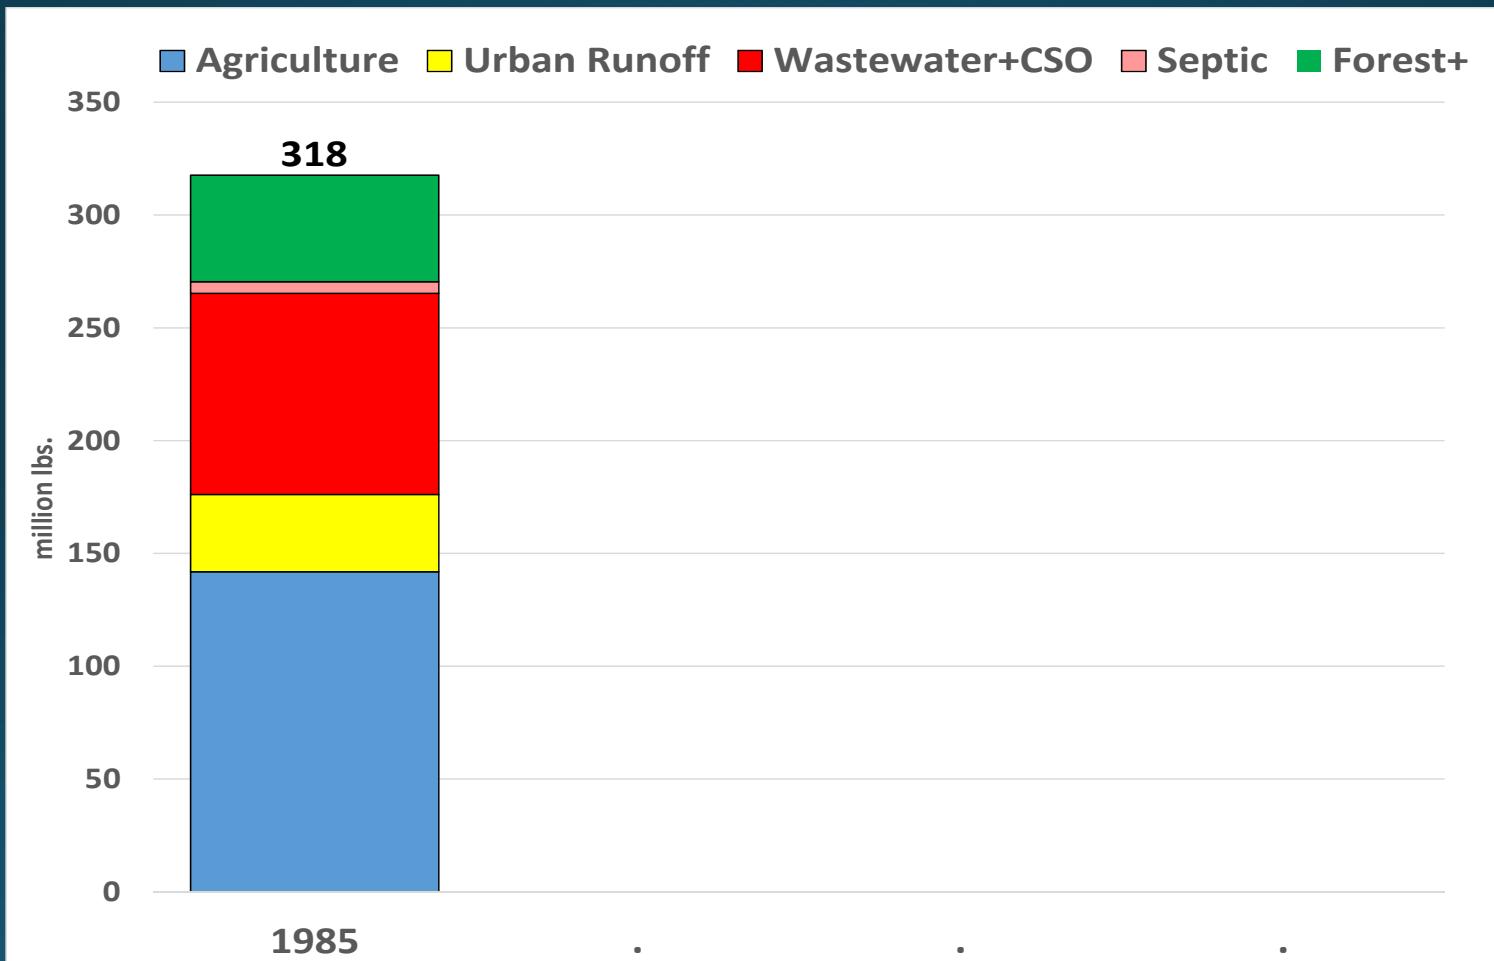

Progress Toward TMDL Goals

- Did jurisdictions make or miss the mid-point 60% goal and by how much, why or why not?
 - 60% goal is 60% of the difference between 2009 and 2025 loads for nitrogen, phosphorus and sediment

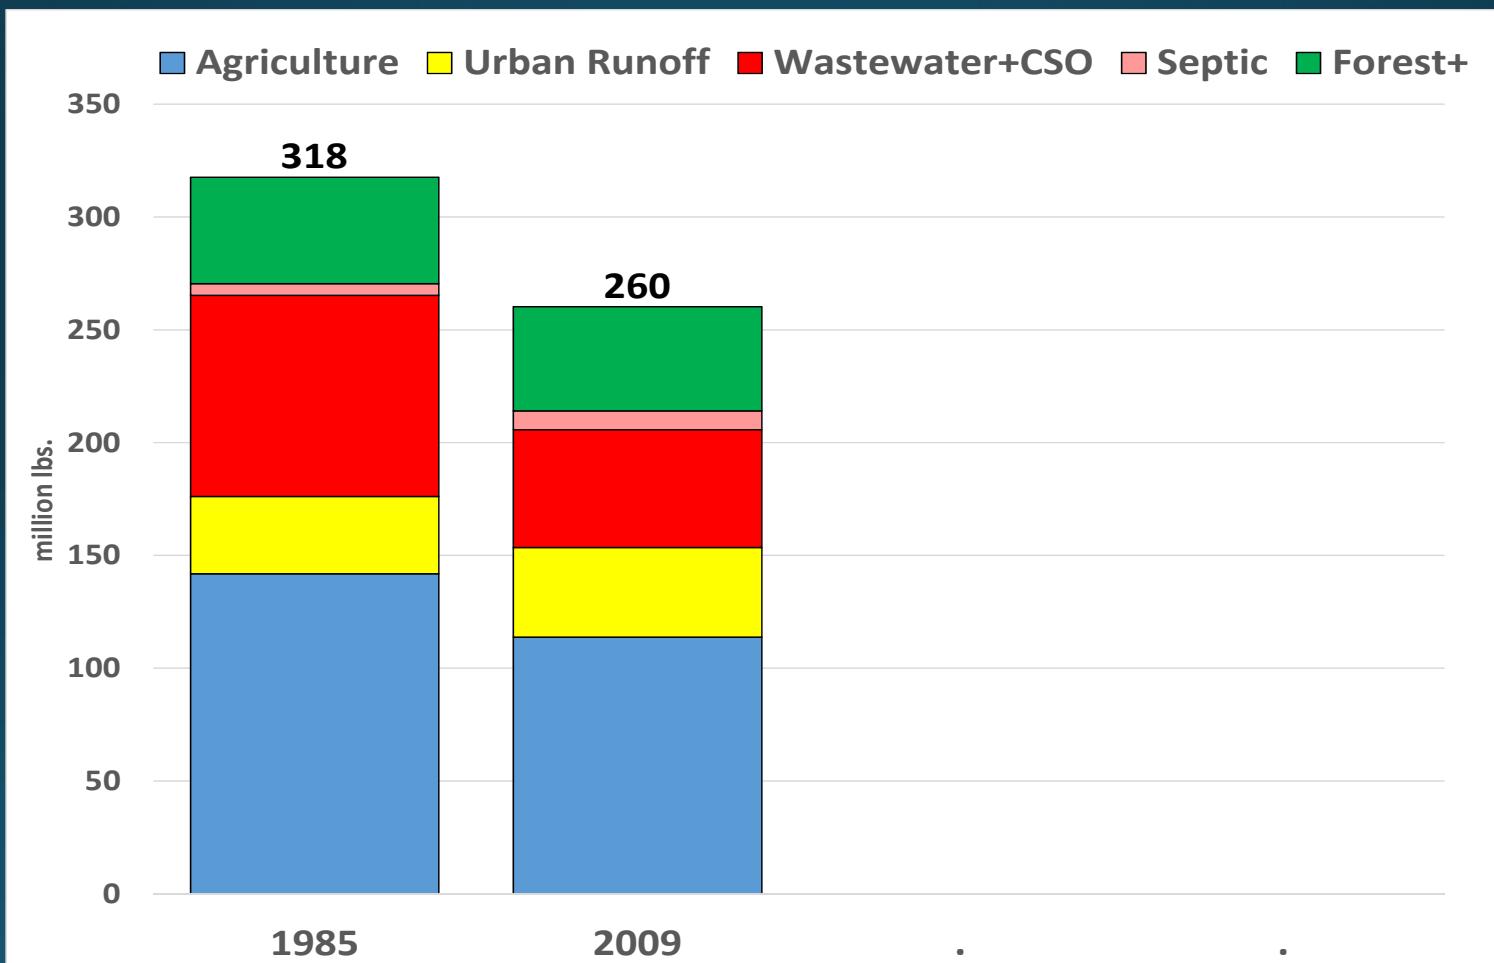

Chesapeake Bay Watershed Nitrogen Loads

2017 Progress Load Review Chesapeake Bay Watershed

For 2017, the goal is to achieve 60% of the planned 2009-2025 load reductions

- 2017 Nitrogen is at 36% of this goal
 - The only source meeting the 60% target is wastewater
- 2017 Phosphorus is at 86% = better than the target
 - Agriculture and wastewater have achieved mid-point goals
- 2017 Sediment is at 66% of its goal

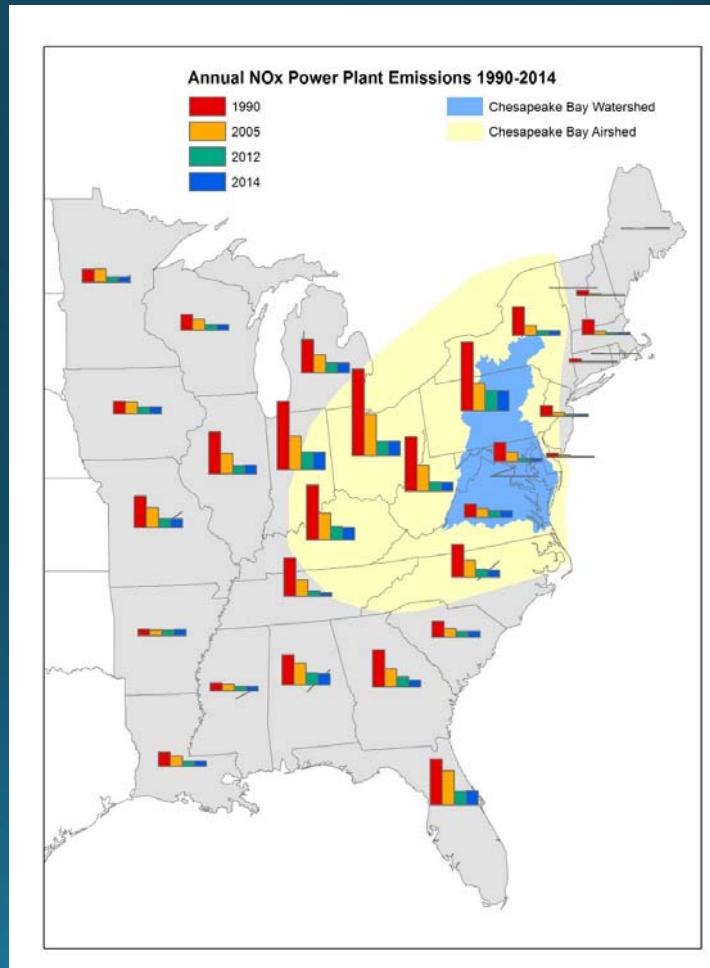

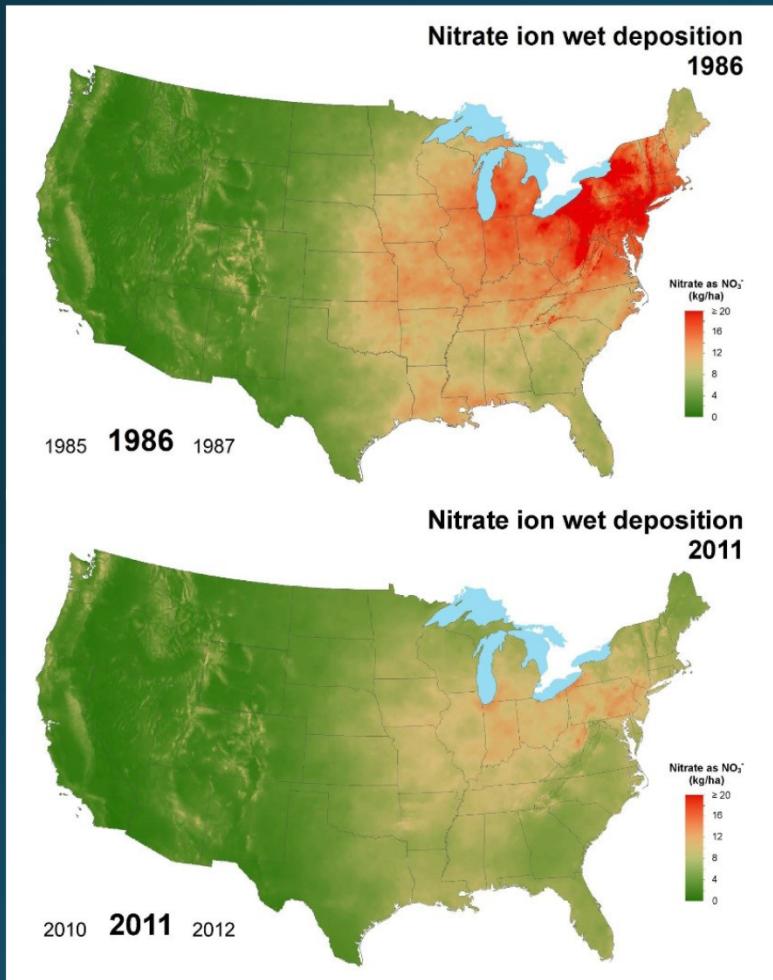

Where did the load reductions come from?

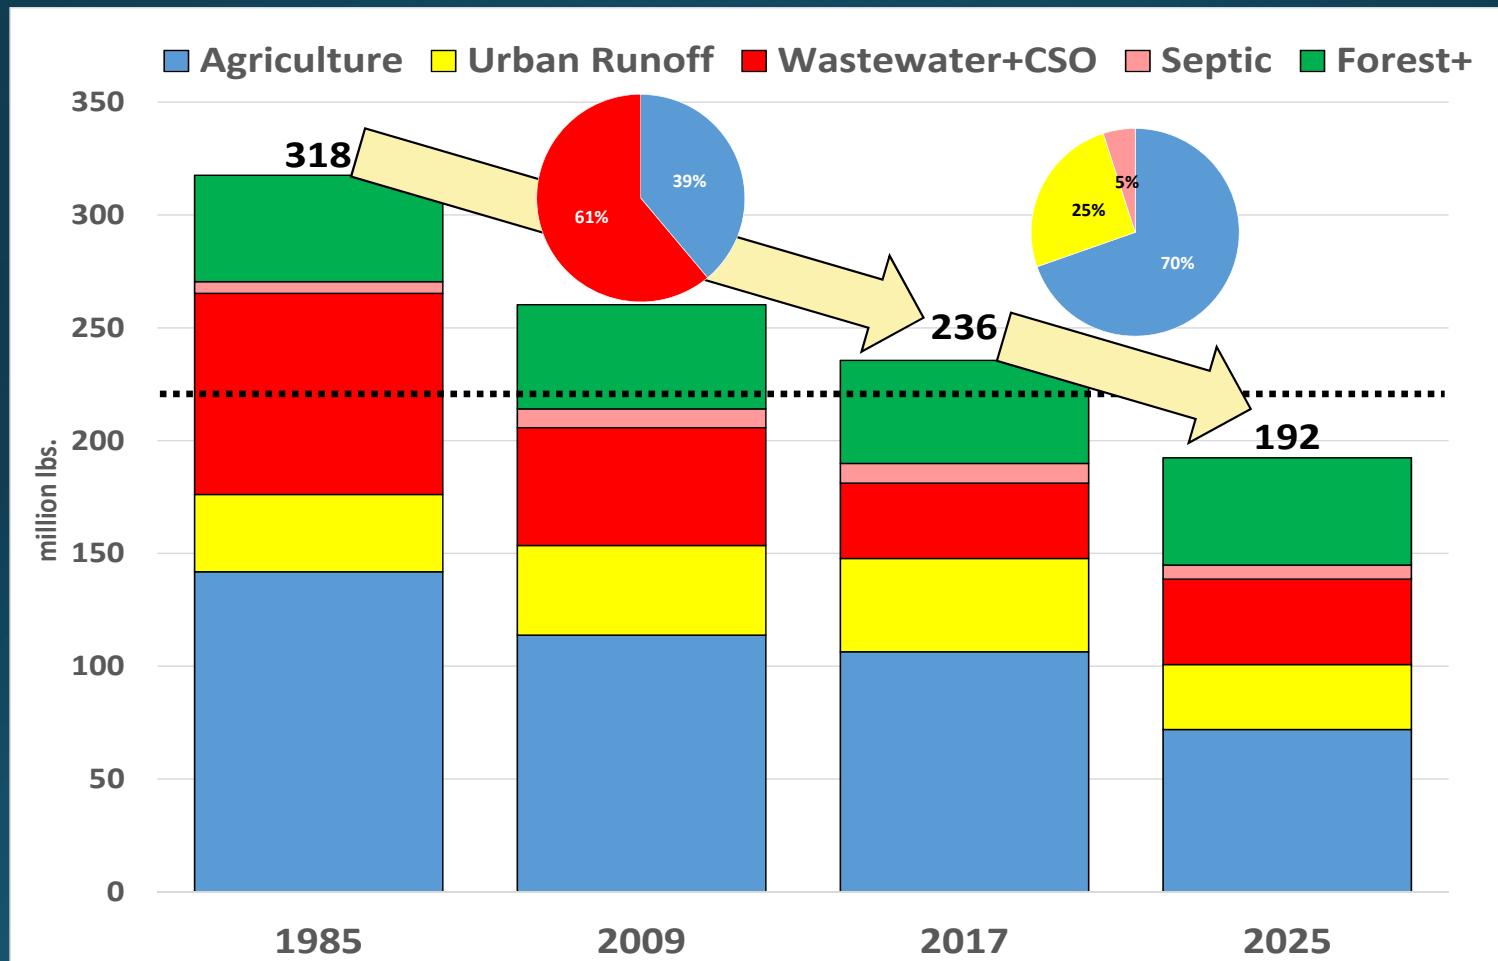

Where did the load reductions come from?

Clean Act Air Implementation by the states has resulted in a 35 million pound reduction of Nitrogen loads to the Chesapeake Bay from 1985 to 2015

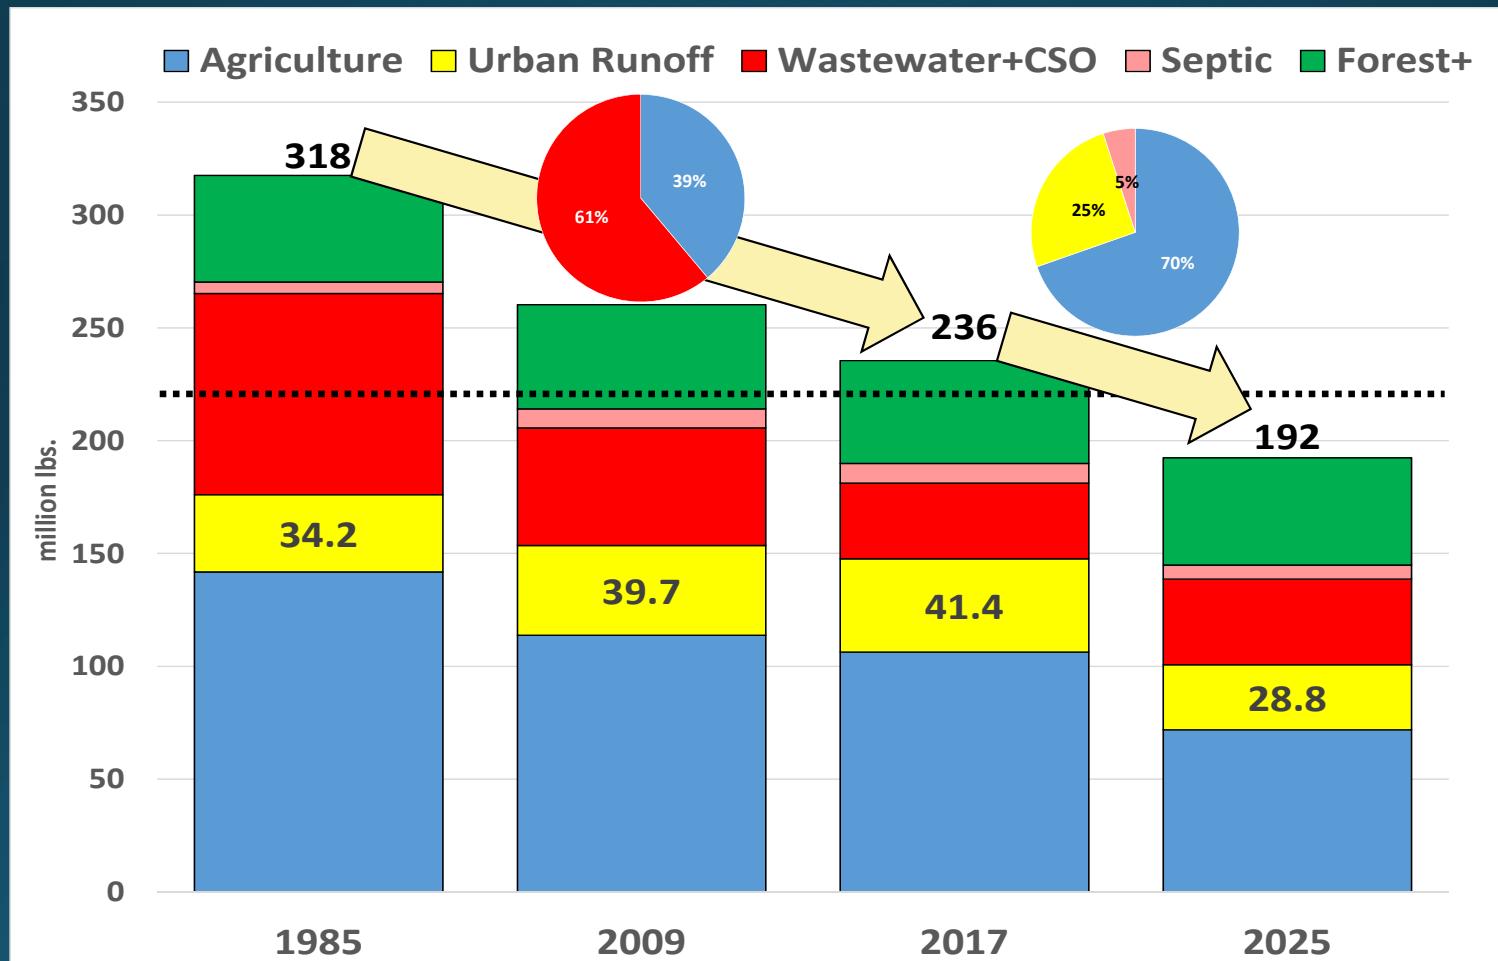

Where will future reductions come from?

Where will future reductions come from?

New York's Progress and Milestone loads are compared to 2 targets for 2017 60% and 2025: 1) based on meeting Phase II WIP planning targets necessary to meet water quality (blue); and 2) based on NY's Phase II WIP commitments for 2025 (purple).

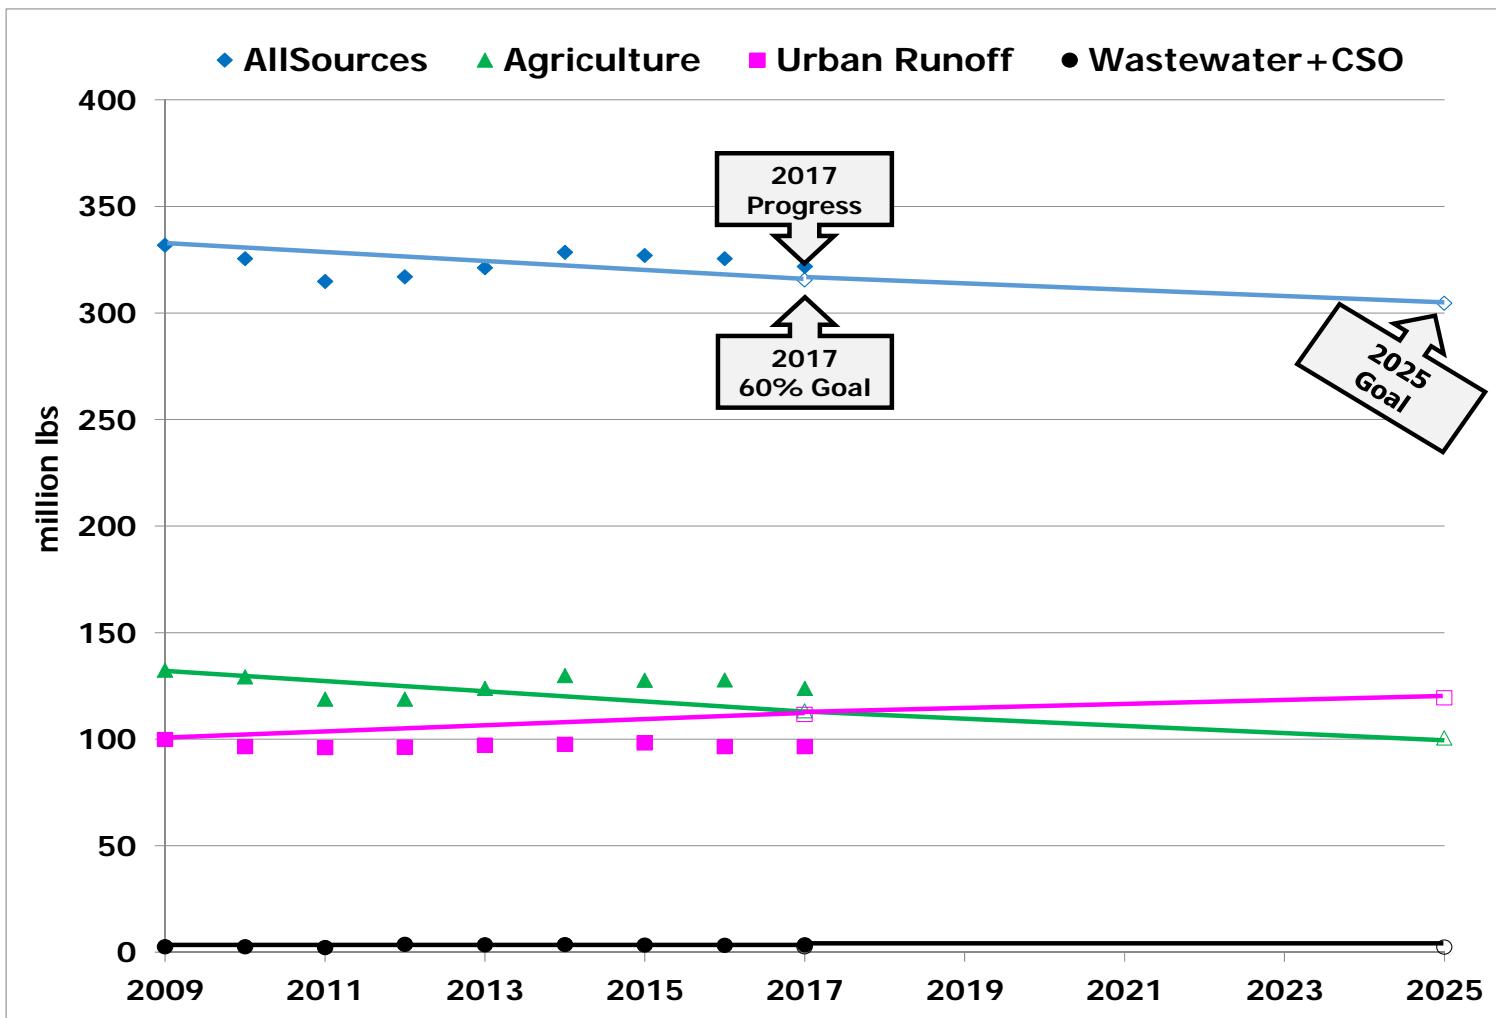

NY Nitrogen Loads-Goals

NY Phosphorus Loads-Goals

NY Sediment Loads-Goals

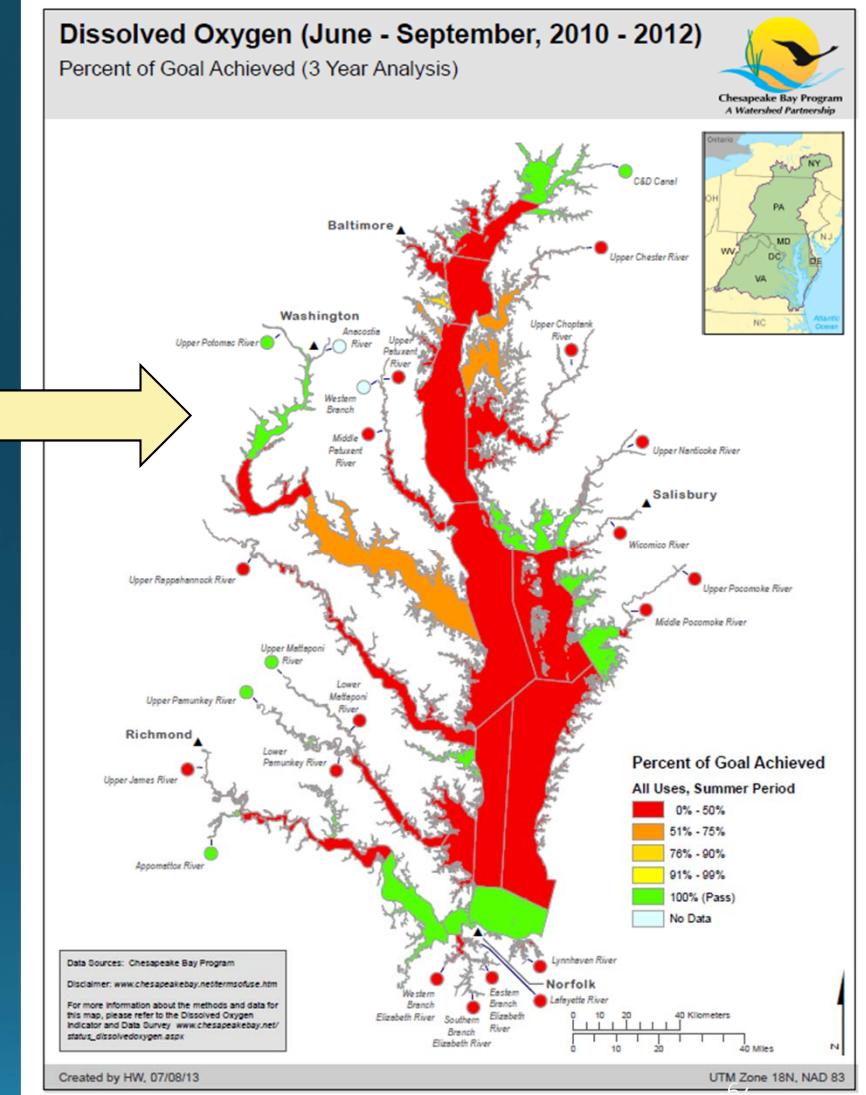

How do we measure progress?

- 1) Trends from monitoring data throughout the estuary
- 2) Trends in monitored loads from the non-tidal water network
- 3) Reported programmatic achievements
- 4) Reported BMP implementation levels
- 5) Modeled loads

Chesapeake Bay Impairments

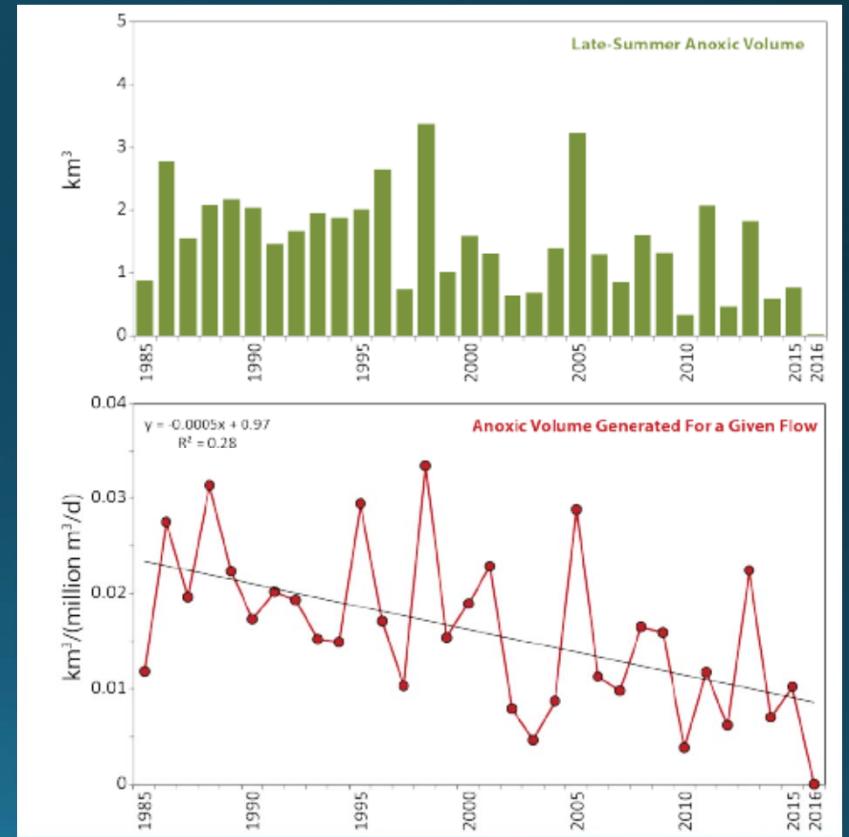

- Dissolved Oxygen
 - Chlorophyll a
 - Water Clarity
(SAV Abundance)

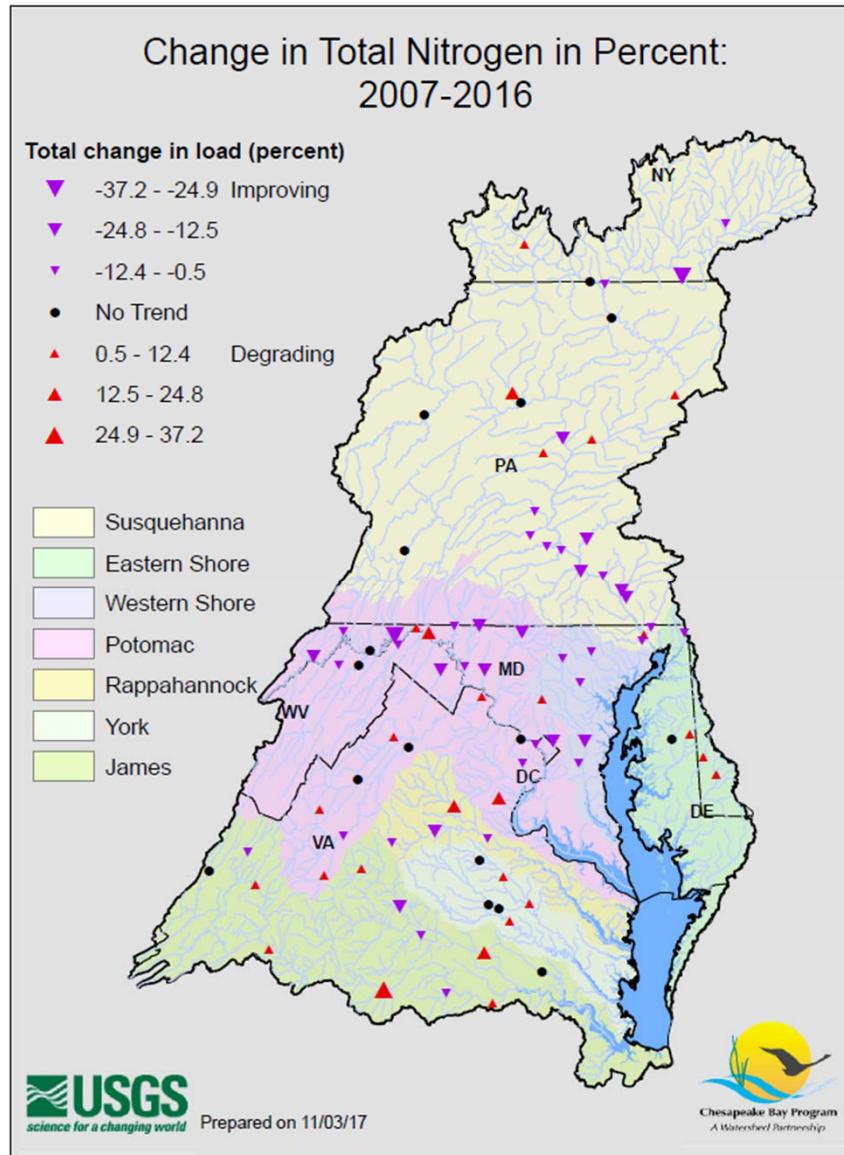

Progress Toward TMDL Goals

- The Bay and watershed are responding to 30+ years of our individual and collective actions.
- We are at a tipping point for Bay restoration.

Source: Testa, 2017 unpublished

Progress Toward TMDL Goals

Trends in short-term Nitrogen loads - describe whether relative water-quality conditions (independent of flow) are improving, degrading, or not changing.

The trend results are our best tool for linking watershed management and watershed conditions to water-quality change.
