## 2017 Progress Load Review

### Numeric

---

- Did each jurisdiction make or miss the 60% goal and by how much, why or why not?
  - 60% goal is 60% of the difference between 2009 and 2025 (WIP II) loads for nitrogen, phosphorus and sediment
- Determination is made using Phase 5.3.2 model
  - the one used to set the goals.

## 2017 Progress

### Numeric

---

- This will be the last Progress assessment with Phase 5.3.2 model. Future progress years will be run with the Phase 6 model (CAST).
- Most BMP and wastewater data was due 12/1/17
- Final version of 2017 Progress is version 7

## 2017 Progress

### Numeric

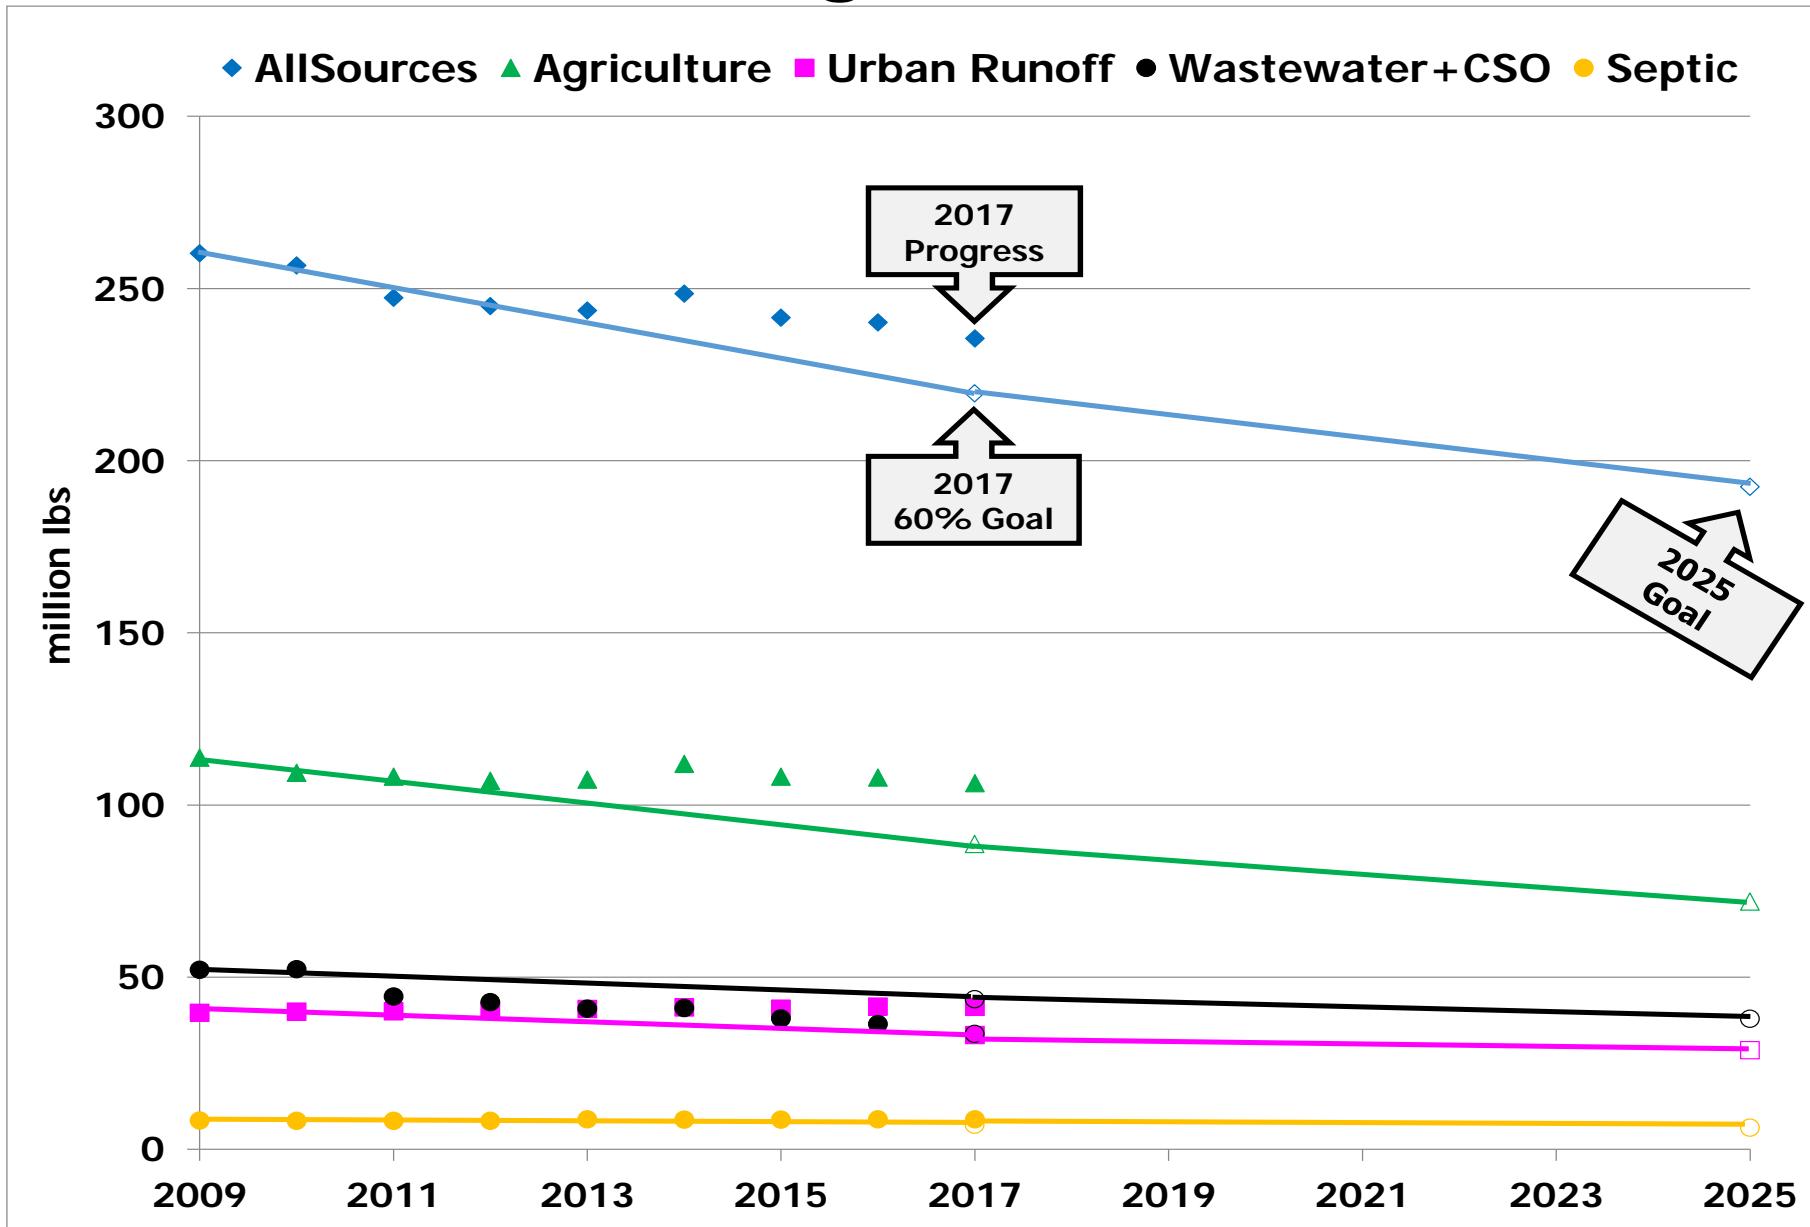

---

- Versions 1 – 7: Reports for BMPs, loads, watershed conditions, submission errors were provided through jurisdiction's password-protected ftp sites + BayTAS for review.
- State Verification Plans (QAPPs) should have been up to date by 12/1/17 – describing new data sources, methods, and verification that pertain to the new BMP and wastewater data.

2017 Progress  
Chesapeake Bay Watershed  
Composite

# CBW Nitrogen Loads-Goals

## 2017 Progress Load Review

### Chesapeake Bay Watershed

---

#### Modeled Nitrogen Load Changes

- Since 2009, Nitrogen loads decreased an estimated 25M lbs. (9%).
  - Among jurisdictions, 49% of the N load reduction is from VA, 23% from PA, and 20% from MD.
    - Currently, 24% of the N load is from VA, 47% from PA, and 20% from MD.
  - Among sources, 70% of the 2009-2017 N load reduction is from wastewater and 28% from agriculture.
    - Currently, 14% of the N load is from wastewater, 45% from agriculture, 19% from forest, 18% from developed and 4% from septic.

## 2017 Progress Load Review

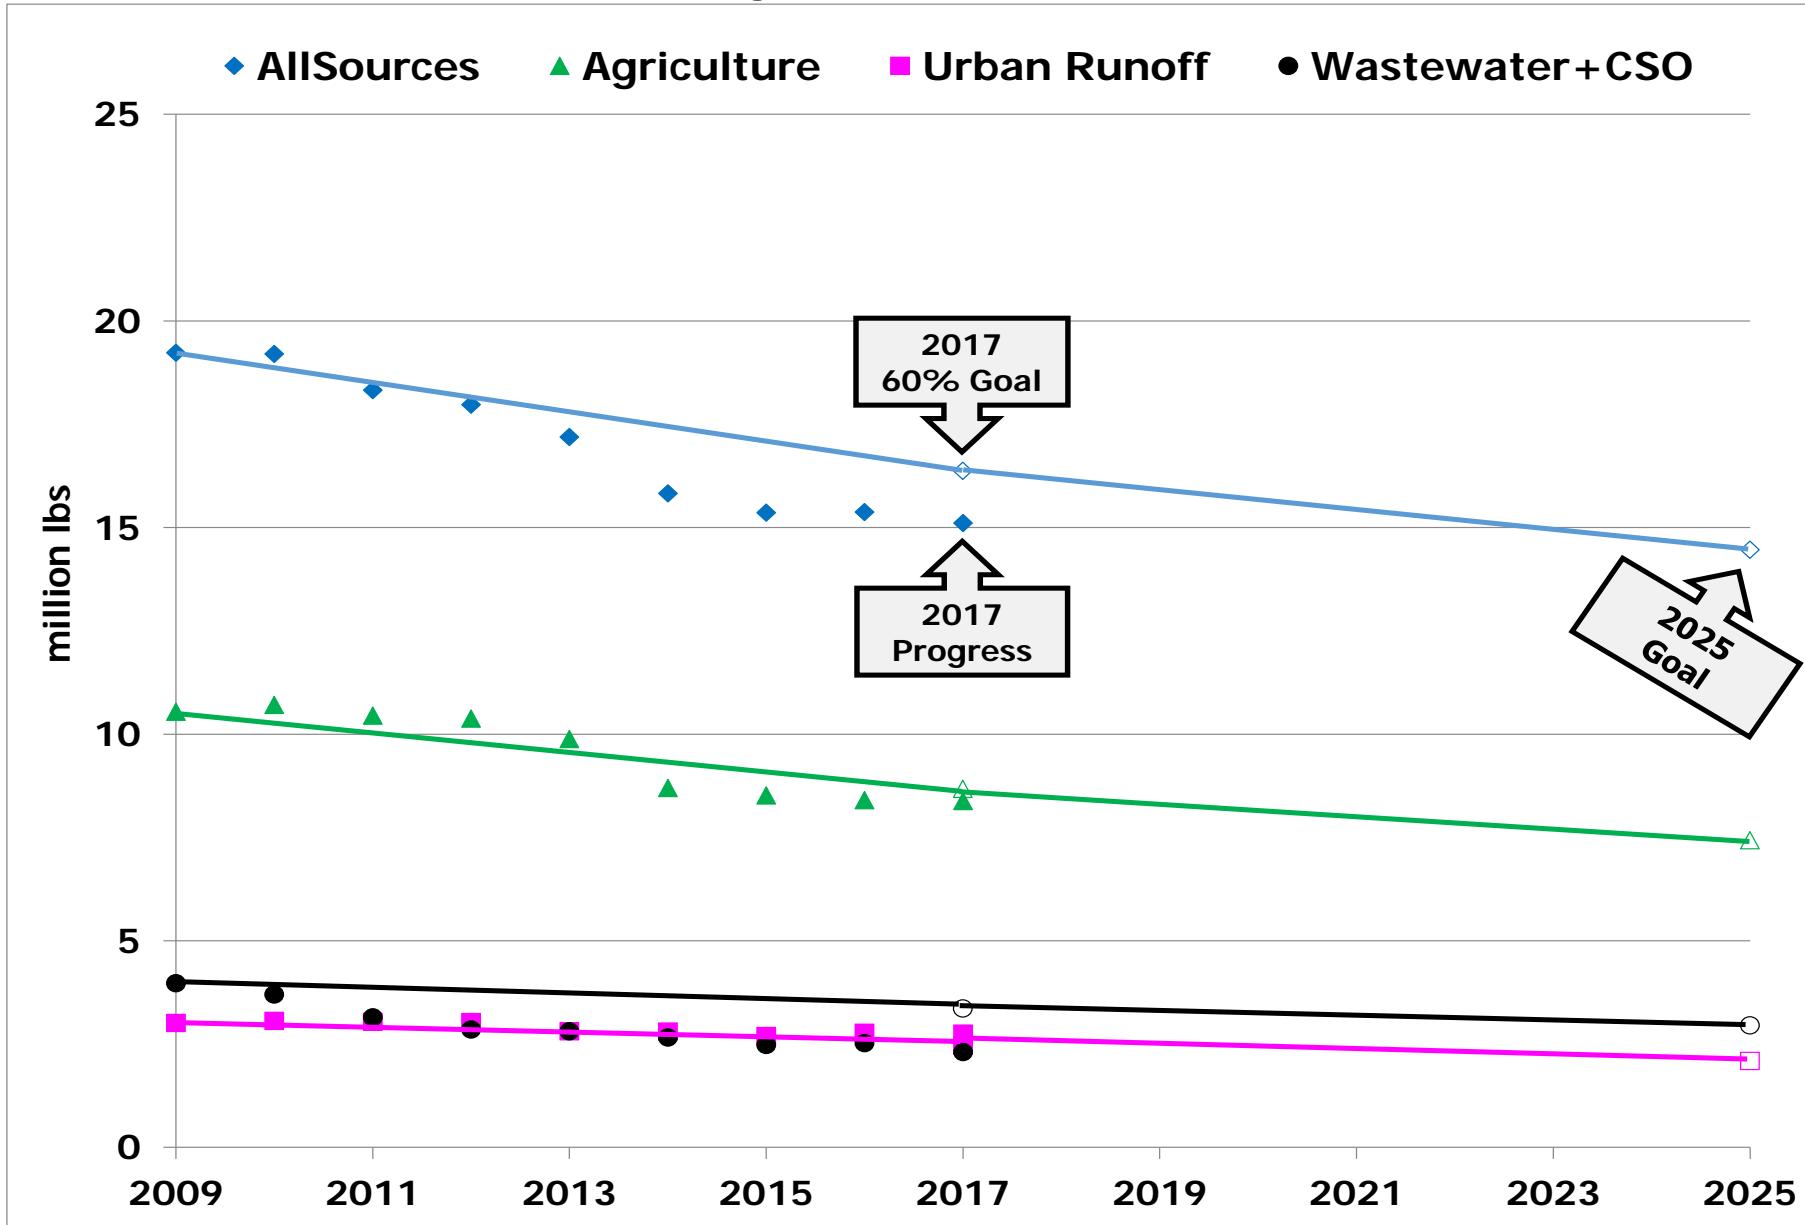

### Chesapeake Bay Watershed

---

#### Modeled Nitrogen Load Changes

- For 2017, the goal is to achieve 60% of the planned 2009-2025 load reduction.
  - 2017 Nitrogen is at 36% of this goal.
  - The N gap with the 2017 goal is 16M lbs. The PA gap in 2017 is 17M lbs. N.
  - The only source meeting the 60% target is wastewater.

# CBW Phosphorus Loads-Goals

## 2017 Progress Load Review

### Chesapeake Bay Watershed

---

#### Modeled Phosphorus Load Changes

- Since 2009, Phosphorus loads decreased and estimated 4.1M lbs. (21%).
  - Among jurisdictions, 54% of the P load reduction is from VA, 19% from PA, and 14% from MD.
    - Currently, 43% of the N load is from VA, 28% from PA, and 18% from MD.
  - Among sources, 53% of the 2009-2017 P load reduction is from agriculture and 40% from agriculture.
    - Currently, 55% of the P load is from agriculture, 18% from developed, 15% from wastewater, and 11% from forest.

## 2017 Progress Load Review

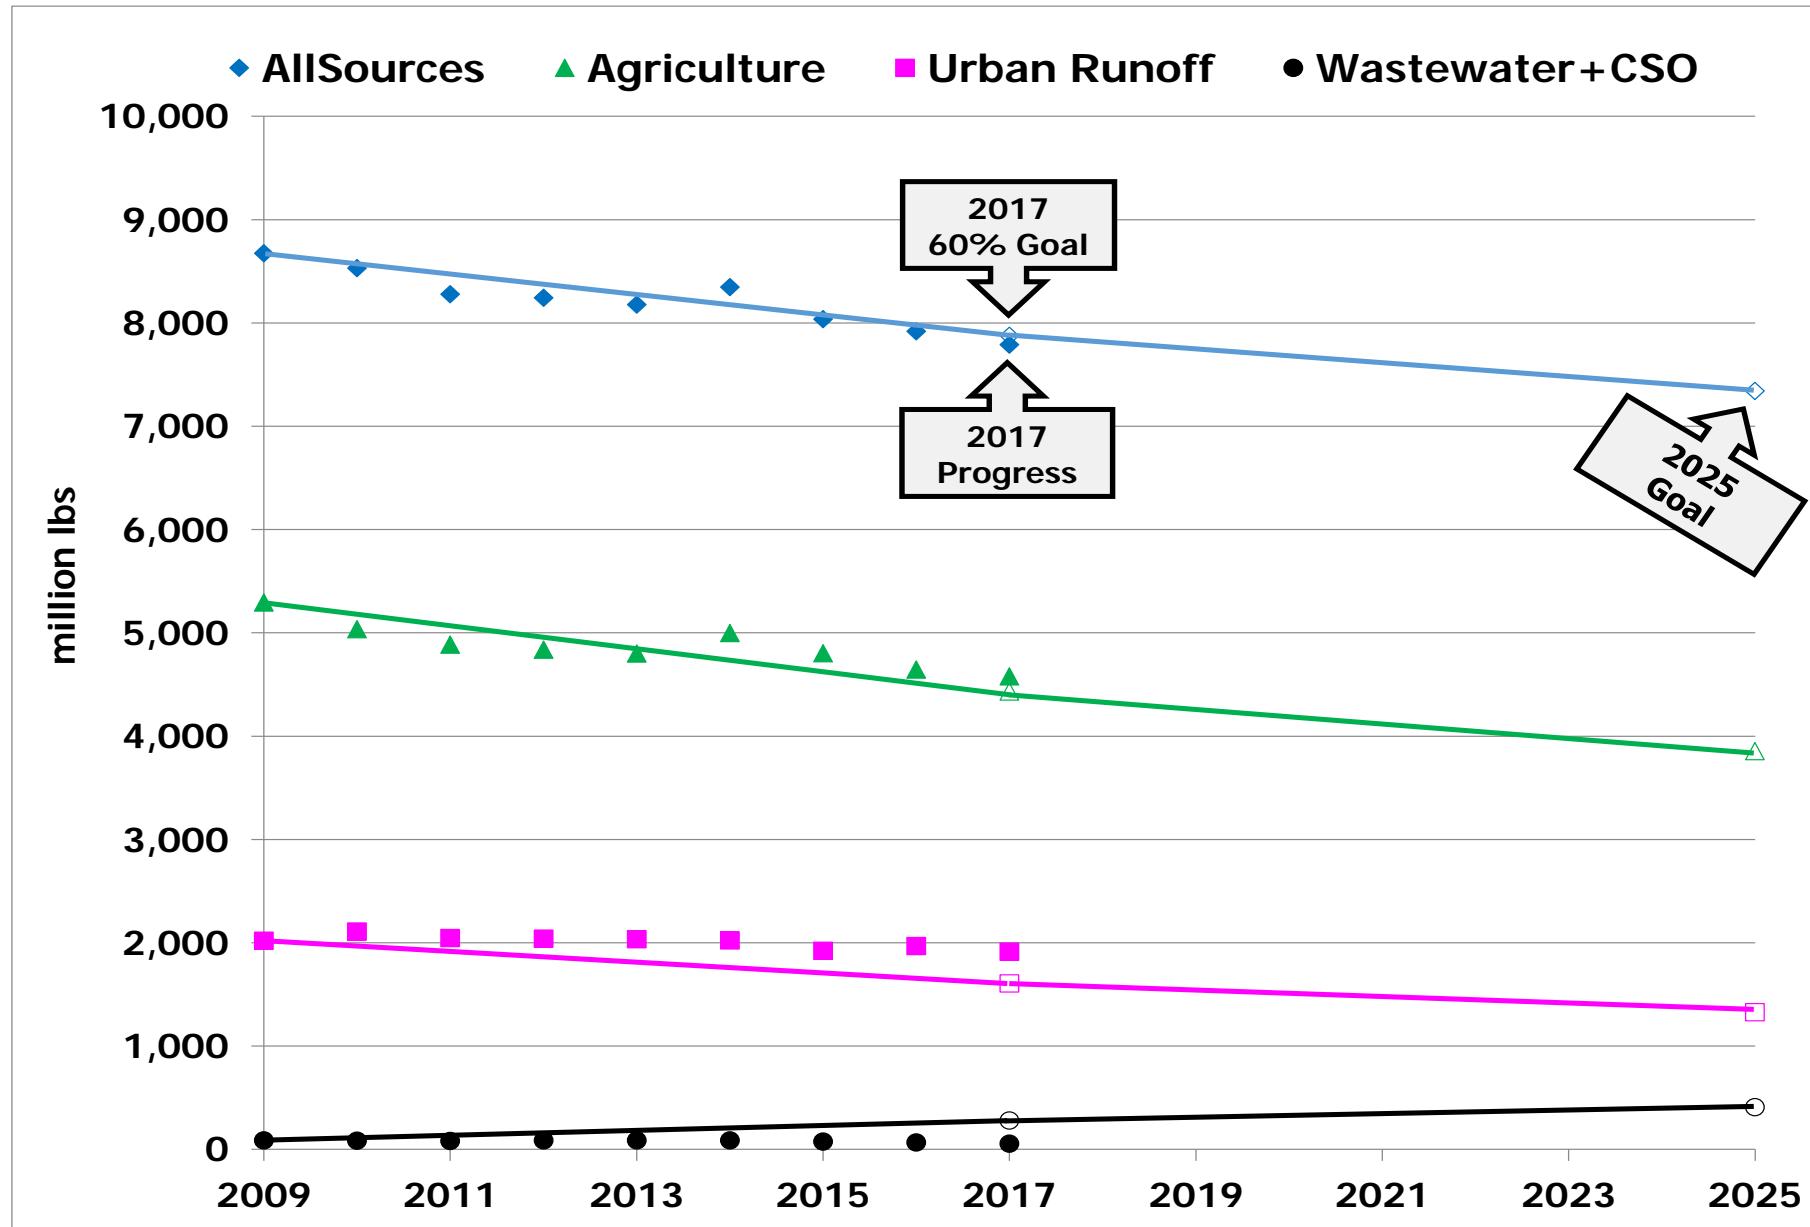

### Chesapeake Bay Watershed

---

#### Modeled Phosphorus Load Changes

- For 2017, the goal is to achieve 60% of the planned 2009-2025 load reduction.
  - 2017 P is at 86%, better than the target.
  - P loads remain below the trajectory target for agriculture and wastewater.
